

1. Description?

- Amanote is an application that simplifies **taking notes**. With the application you can take notes and mark directly on digital course material - such as PDFs, photos and Powerpoint presentations.

2. For whom and why?

- Amanote is mainly for students, as this tool allows them to type **structured notes** next to digital documents during, for example, lectures and conferences. This leads to an improvement of productivity and efficiency during these lectures and studying.

3. How does it work?

- Via the software package Amanote you can make digital notes next to the accompanying slides. Amanote presents the slide on the left and makes space for notes on the right.
- When taking notes, Amanote offers the same options as a regular **word processor**: font and paragraph options and the addition of images, diagrams, formulas, tables, symbols and code fragments. The user can also make a sketch, which he then adds to the notes.
- Finally, the user can mark the slides with the **highlighter** and can add a note at a specific place in a slide via the "Insert PDF Annotation" option.

4. Pricing

- Amanote is available through an **annual subscription**.

5. Language

- Amanote is available in **English**.

6. Type and platform

- Amanote is a cloud-based tool, available for the computer, tablet and smartphone.
