# AmberScript
## Assistive technologies

## 1. Description?

☐ **AmberScript** automatically **converts audio and video into text**. Using speech-to-text algorithms, AmberScript quickly converts audio into an accurate transcript, which can be easily shared and edited via the associated online **word editor**.

## 2. For whom and why?

☐ The program has been developed to support people with a **hearing impairment** but is also useful for other students and mentors. People with a hearing impairment often have difficulty following spoken audio or video. Via **Automatic Speech Recognition** (ASR), AmberScript automatically generates **subtitles or transcripts**, making audio and video accessible. Because the software can quickly generate subtitles and transcripts, people with a hearing impairment can also follow the content without restrictions.

## 3. How does it work?

☐ **Convert** | AmberScript converts an audio or video file into a transcript which is easy to edit.

☐ **Synchronization** | Then the transcript is "glued" to the audio timeline.

☐ **Adjust**| With simple software, the user can now search the transcripts, highlight and adjust / edit parts of the transcript if necessary, so that they are 100% correct.

## 4. Pricing

☐ With the **free trial plan**, you get 30 minutes of audio for free. After that, you have to **pay** to use AmberScript. The AmberScript employees provide the necessary adjustments to the transcripts.

## 5. Language

☐ AmberScript is available in multiple languages, including English.

## 6. Type and platform

☐ AmberScript is a **software program**, available on laptop or computer (Windows and Mac).

## 7. More information?

☐ Here you can read more about AmberScript.
