ColorSay
Assistive technologies

1. Description?

☐ **ColorSay** is a so-called **color scanner** for the iPhone and is optimized to work with the iPhone's **VoiceOver** function. Users point the camera at a color and then hear out loud which color it is. ColorSay knows the names of colors in English, German, French, Spanish, Italian, Dutch, Turkish, Russian, Chinese and Japanese.

2. For whom and why?

☐ The app specifically targets users with **color blindness**.

3. How does it work?

☐ After installing the app, point your iPhone's **camera** at a **color**. You'll hear out loud which color it is. You can determine how many shades of color the app should recognize. The minimum setting is sixteen colors, which gives you very understandable color names. If you choose the maximum of 386 recognizable colors, you might get unclear color names at times.

4. Pricing

☐ ColorSay is available in the Apple App Store. You **purchase** the application **once**.

5. Language

☐ ColorSay is available in multiple languages, including English.

6. Type and platform

☐ ColorSay is an **application** for **smartphones** running on **iOS**.

7. More information?

☐ Download the ColorSay app here.
