

1. Description?

- Doodle** is an application to schedule a joint appointment. You can also distribute tasks within Doodle, e.g. to determine who has to do which chore and you can also hold polls with it, for example to determine which restaurant you are going to.

2. For whom and why?

- Doodle is interesting for students and mentors. Think of group works or joint activities where it can be difficult to set a date suitable for everyone. Via doodle, everyone can easily indicate when they are available.

3. How does it work?

- The organizer offers possible dates and times for the activity and shares it with the participants. Once participants fill out their availability in the **clear timetable**, you can see who is available when. You can share the appointment via a **link**, so you don't need the recipients' email addresses.

4. Pricing

- The use of Doodle is **free of charge**.

5. Language

- Doodle is available in multiple languages, including English.

6. Type and platform

- Doodle is an **application** and a **website**. Doodle is available for **smartphones** running on **Android** and **iOS** and through the [website](#).

7. More information?

- Visit [the doodle website](#) for more information or to get started with doodle.
