

1. Description?

- The **Envision AI** application uses **artificial intelligence** to read text in real time, describe scenes and describe objects. This gives people with a visual impairment the possibility to “see” the world around them. The application won the Google Play Award for Best Accessibility Experience in 2019.

2. For whom and why?

- Envision AI is an application developed for people with **visual impairments**. With Envision AI you can shop in supermarkets, use public transport, read menus in restaurants, recognize friends, find stuff and much more.

3. How does it work?

- Information** | Based on a photo, Envision AI processes information about an object, scene, or text you want to know more about.
- Read aloud** | The app can read texts from any surface accurately and quickly, automatically detect the language and read it in the right dialect.

4. Pricing

- Envision AI has a 14-day **free trial**. After this, the application is paid for via a monthly, annual or lifetime subscription

5. Language

- Envision AI is available in English.

6. Type and platform

- Envision AI is an **application** for **smartphones** and **tablets** running on **Android** and **iOS**.
